Returning Data

```
ISNULL (X, Y)
COALESCE (X, Y, Z)
CASE
    WHEN X IS NULL
        THEN Y
    ELSE Z
END
NULLIF (X, Y)
```

Ordering and Paging

```
SELECT TOP(5) WITH TIES OrderID  
FROM Orders  
ORDER BY OrderDate DESC;
```

```
SELECT OrderID  
FROM Orders  
ORDER BY OrderDate DESC  
OFFSET 0 ROWS  
FETCH NEXT 5 ROWS ONLY;
```

Takeaway

SQL is based on the relational model; you must start thinking in sets

Query execution order should become your second nature

Dealing with NULLs isn't easy, but the alternatives are far worse

Don't sweat over syntax; focus on foundations and understanding
